VEDANT DALVI

Computer Engineering Student | Full-Stack Developer | Game & Animation | AI & Cybersecurity
Maharashtra, India • 9653159474 • vedant.v.dalvi24@slrtce.in • LinkedIn • GitHub: vedantuj-lab

PROFESSIONAL SUMMARY

Computer Engineering student (Semester V) building full-stack and AI-powered web applications across healthcare, agri-tech, civic safety, fintech, and cybersecurity. Comfortable owning a project end-to-end, from problem analysis and solution architecture through to a working React/Next.js frontend and deployed backend. Passionate about **game development and animation**: creates interactive 3D, particle, and motion-driven experiences for the browser using Three.js, WebGL, GSAP, and Framer Motion. Regular builder of hackathon and academic prototypes using modern AI-assisted development workflows, with a growing interest in deepfake and voice-cloning detection.

TECHNICAL SKILLS

Languages & Core	TypeScript, JavaScript, HTML, CSS
Frontend	React, Next.js, Tailwind CSS, Framer Motion, GSAP, Three.js / React Three Fiber (WebGL, 3D & particle experiences)
Game Development	Browser-based game development with JavaScript/TypeScript, Three.js & WebGL; game loops, 3D scenes, camera & controls, collision and interaction logic, game UI/HUD
Animation & Motion	GSAP (timelines, ScrollTrigger), Framer Motion, CSS animation, 3D and particle animation, scroll-driven and interactive motion design
Backend & Services	Firebase, Supabase, Node.js, Clerk (auth), Stripe (payments)
AI & Tooling	Claude / Claude Code, Google AI Studio (Gemini API), Lovable, AI-assisted ('vibe coding') development workflows
Deployment	Vercel, Vercel Edge, Netlify, GitHub Pages
Cybersecurity & AI	CIA triad, cyber threat analysis, deepfake & synthetic media detection, voice cloning detection
Tools	Git/GitHub, VS Code

SELECTED PROJECTS

SIH26104 — AI-Powered Real-Time Voice Cloning & Impersonation Detection

Smart India Hackathon 2026 · Team of 6

- Selected problem statement SIH26104 (AICTE), focused on real-time detection and prevention of AI voice-cloning impersonation attacks, software track
- Contributing to solution architecture and system workflow design ahead of the presentation round, with a working app planned if the team advances

AgriN

AI Agronomist Platform · BRICS Cooperation Theme

- AI-driven agronomy web app for smallholder farmers, combining satellite, soil, and weather data into diagnosis and treatment guidance, plus a digital twin feature
- Built with React 19, TanStack Start/Router, Tailwind v4, and Radix/shadcn; currently leading a visual redesign to add 3D and motion effects

Interactive University 3D Map

WebGL Campus Navigator · College Hackathon, 36-hour build

- Concept and architecture for a GPS-based indoor/outdoor pathfinding app across a 3D campus model, with accessibility-aware routing and elevator/multi-floor support
- Planned stack: Three.js, WebGL and Leaflet on Next.js, with Firebase/Node.js backend and Blender/CesiumJS/Mapbox for the 3D pipeline

SafeManhole

Civic Safety Web App · Hackathon

- Crowd-reporting platform for hazardous or displaced manhole covers, using AI photo verification instead of IoT hardware to keep the solution deployable
- Designed a multi-dashboard, authenticated UI backed by live user reports and government/weather data rather than mock data

Real-Time Stock Market Sentiment Dashboard

FinTech Hackathon (edQuest) · 24-hour build

- Designed a pipeline to ingest ~10k tweets/min via the X API, classify ticker sentiment with a fine-tuned FinBERT/RoBERTa model, and surface it on live trader dashboards
- Planned stack: Next.js + Recharts frontend, FastAPI + Kafka backend, Apache Spark and WebSockets for real-time streaming

TuitionTrack

Tuition Management Platform

- Web app for Indian tuition teachers to manage student registration, fee collection, SMS/notice/call communication, and attendance & fee reports
- Built with React, Firebase, and the Gemini API; extended into a companion mobile app

GAME DEVELOPMENT & ANIMATION

- Build interactive 3D and particle experiences in the browser with Three.js / React Three Fiber and WebGL, applying the same real-time rendering concepts used in game development
- Design motion and animation for web interfaces with GSAP and Framer Motion, including timelines, scroll-triggered sequences, and micro-interactions
- Apply 3D and motion effects in project work such as the AgriN redesign and the Interactive University 3D Map
- Interested in game design, gameplay mechanics, and interactive storytelling, and in combining them with AI and web technologies

RESEARCH & PROJECT SKILLS

- Problem Statement Analysis, Literature Review, Solution Architecture, System Workflow Design
- Feasibility & Viability Analysis, Technical Documentation, Technical Presentations
- Hackathon Problem Solving, Innovation & Ideation, UI/UX Concept Development

AREAS OF INTEREST

- Artificial Intelligence & Machine Learning, Cybersecurity & Ethical Hacking
- **Game Development, Animation & Motion Design**, Full-Stack & 3D/WebGL Web Development
- Deepfake & Voice Cloning Detection, Smart City, Healthcare, and Financial Technology

EDUCATION

Bachelor of Engineering (B.E.) — Computer Engineering

Shree L.R. Tiwari College of Engineering | Semester V | Expected Graduation: 2028

LANGUAGES

English, Hindi, Marathi
